

To Our Guests:

We have quite a variety of beautiful Humming Birds that visit us each year.

Ruby-Throated Hummingbird

If you'd like to keep them around, here are our suggestions:

We usually have more than one Humming Bird feeders for a reason.

They have voracious appetites and are quite territorial. They will put on quite a aerial show trying to keep each other away from the feeders and to get their turn!

Keep an eye on the feeders to make sure they have enough food. They don't need to be full – just enough for them to reach the sugar water.

Please do not use commercial food. Follow the recipe below:

(Use two cup glass measuring cup)

Add 1/2 cup of granulated sugar

Add water - fill to 2 cup mark (3 to 1 ratio)

Stir and microwave the mixture (on high) for 2 minutes

Remove and stir sugar water thoroughly

Set aside mixture for use when needed.

Keep in the quart jar on the counter.

NOTE: The feeders should be brought in each night!

Sweet sugar water may be an irresistible attraction for any bears in the area
